Description: Ports of Jersey want to make internal configuration changes to the current Elizabeth Terminal building which will provide more capacity post-security, improve access to existing amenities within the Terminal. In addition, better access to and refurbish existing toilet facilities, provide space for a stand-alone retail unit and generally improve **passenger experience** through the terminal building. All the changes detailed in the building regulations application are to support short-term improvements to the **passenger experience** and to provide fit for purpose facilities prior to undertaking the Elizabeth Harbour Redevelopment, part of the St Helier Harbour Masterplan. Ports of Jersey are considering a phased approach to delivery of this project and would like to deliver as many of the benefits for capacity and **passenger experience** prior to the summer peak from July 2024 onwards. Works include internal contraction, demolition and MEP
